

## MCEM SAQ example No.3

A 50-year old farmer presents with a 3-day history of a productive cough with haemoptysis. CXR and observations are shown below:

Resp rate	22
Pulse rate	90
Sats (on air)	94%
BP	110/75
Temp	37.8°C
GCS	15/15

- Which four investigations A&E would help you to reach a diagnosis?
- Describe 2 features of the CXR.
- What features differentiate between collapse and consolidation on CXR?
- You decide that the patient is well enough to go home. What 2 drugs would you prescribe on discharge?
